PROFILE

Experienced Associate Software Developer specializing in React within the MERN stack, with expertise in frontend and backend development, including Java. Proficient in React Native and TypeScript. Proven track record of delivering impactful projects through collaborative teamwork.

SKILLS

Programming Skills
- Android/iOS Development (React Native)
- Full Stack Web Development (MERN)

Artificial Intelligence
- Open CV

Technical Skills
- JavaScript
- TypeScript
- Java
- Python
- React
- React Native
- HTML
- CSS
- Tailwind,
- Material-UI
- Node.js
- Next.js

EXPERIENCE

ASSOCIATE SOFTWARE DEVELOPER | Wise360 Solutions
September 2023 – Present

Specialized in React Native. I've focused on building and refining mobile applications, with a strong emphasis on state management using Redux and Context API. While my primary focus is on enhancing my expertise in React Native, I also continue to strengthen my foundation in full-stack development by working with React, MongoDB, Express.js, and Node.js. Additionally, I am expanding my skill set by delving into TypeScript and Next js to improve code quality and maintainability across all projects.

Achievements
- Awarded Employee of the Month.
- Received Best Progress-Based Bonus twice.

Company projects
- Eat Reserve
- Relaxation Mobile Application

ASSISTANT SUPERVISOR | FOREVER LIVING PRODUCTS COMPANY.
January 2020 – June 2020

I have experience with an international company Forever Living Products for about 6 months which enhanced my communication skills.

EDUCATION

PROJECTS

Bachelor Of Science in Software Engineering

• SEP 2019 - AUG 2023

COMSATS University Islamabad, Abbottabad Campus

- **SEQAR – Full stack development**
  It is an augmented reality application in react native which is developed to teach sequence diagrams to the students.
- **Eat Reserve – Full stack development**
  This is a web app which was developed in MERN. It is basically a restaurant automation service providing app. In this app different restaurants register themselves and make their profile by adding food items they have. Then on the customer side, the customer scans the QR code placed on the table and is shown by menu of that respective restaurant.
- **GoShipping US – backend development**
  This web app was also developed in MERN. This acts as a middleware in providing delivery service overseas.
- **My insurance Mobile Application – Full stack development**
  This application is simply based on providing insurance service.
- **Yoga Pose Detection Mobile Application – Full stack development**
  It is a machine learning and computer vision-based application that helps in yoga pose detecting and correcting the poses for better exercises.
- **Business management system – Backend development**
  Backend development for business management using MERN stack: MongoDB, Express.js, React.js, and Node.js.
- **PDF chat Mobile Application – Full stack development**
  Full-stack mobile app development with React Native, OpenAI API integration, Node.js backend, MongoDB database, and Socket.IO for real-time chat.
- **Khan Shaheed Keyboard:**
  This is a keyboard in the Pashto language that is developed in Java so that it can be integrated into mobile devices
- **Relaxation Mobile Application – Frontend development**
  This project is built using React Native and TypeScript, currently under development. It involves the front-end development of a relaxation mobile app aimed at overcoming panic attacks. Features include relaxation exercises, music therapy, yoga sessions and e-commerce store.
- **Relaxation Admin Site - Frontend Development**
  It is developed in Next js where admin manages what should be in the mobile app like subscriptions, adding stores and products, adding audio and video exercises etc.

- **Doli Doc**: Developed a mobile app using Firebase for backend services.

- **Digital Hostel Accommodation System - Full Stack Dev.**
  Different hostel owners can register their hostels. Universities can also register their hostels and allot rooms to students based on their criteria or CGPA. This app is also developed in react native and used node js for backend.

- **Telemedicine - Backend Development (Under Dev)**
  A web application where patients can book appointments with their doctors and have video sessions with their doctor. I work here as backend developer which is also in node js, Restful APIs in express js and use mongo db as database.

- **Community Hub - Backend Development (Under Dev)**
  A MERN application which is a platform where skilled persons will sell their services and people will buy services according to their need. Working on backend implementing real time chats and fulfilling all other functional tasks from backend is my task.
